

Island Alert Curb Marker

**TRAFFIC SAFETY
SUPPLY COMPANY**

DESCRIPTION

The Island Alert Curb Marker is a low-cost safety solution designed to improve the visibility of raised islands, median nooses, pedestrian refuges and similar roadway features. The Federal Highway Administration recommends that all curbs at intersections, including median islands and other raised channelization, be delineated. The exceptional retro-reflectivity provides a clear visual cue to the motorist of the full-radius of raised medians, reducing accidents and improving safety.

Reflectors are made out of 100% polyurethane, the toughest flexible polymer made. Flexibility over a temperature range from -20°F to over 160°F makes these markers suitable for any climate. Notching the base of the reflector further allows the marker to bend to meet almost any geometry. These reflective markers can be installed in a straight line, wide arc, narrow arc, or even in a full circle!

APPLICATION

- Median noses
- Bull noses
- Raised islands
- Pedestrian refuges
- Traffic circles

BENEFITS

- Visible - continuous ribbon of reflectivity
- Simple - prime, peel & stick application
- Practical - low-cost safety solutions
 - improves roadway safety
- Flexible - notched foot allows installation to match curvature
- Durable - UV-stable flexible polyurethane for long life in the field

INSTALLATION

Factory-applied adhesive strips allow for peel-n-stick installation. Simply prime the surface with a simple-to-use spray primer, wait 60 seconds, peel off the release paper and press the reflectors in place.
